NO. OF FUNCTIONAL FEATURES INCLUDED IN THE SOLUTION

SMARTBRIDGE • Let's Bridge the Gap | A SmartBridge Product • SKILL WALLET

Date:	06 October 2026	**Team ID:**	SWTID-2026-5132
Project Name:	LegalEase	**Full Title:**	LegalEase: AI Powered Legal Document Generator
Team Size:	5	**Maximum Marks:**	5 Marks

Functional Features Overview: This document lists all the functional features included in the project solution. Each feature is described with its purpose, implementation status, and contribution to the overall solution.

TEAM WORK ALLOCATION & ASSIGNED RESPONSIBILITIES

S.No	Role	Member Name	Assigned Modules & Work Allocation
1	**Team Leader**	**Arsheeya Farveen A**	System Architecture Design, Front-End UI Layout, Dynamic Template Customizer, Project Management & Workflow Integration.
2	**Team Member**	**Abinaya R**	Backend API Integration, AI Legal Document Generation Engine, Clause Extraction Pipeline & LangChain Logic.
3	**Team Member**	**K Akshaya**	Database Schema & Management, User Authentication (JWT), Security Protocols, Document Encryption & History Management.
4	**Team Member**	**Anitha S**	Automated PDF Export Engine, High-Fidelity Formatting, Quality Assurance Testing & Automated Test Cases.
5	**Team Member**	**Anupriya S**	Compliance Scanner Engine, Statutory Validation Logic, Multi-language Support Pipeline & User Feedback Module.

FUNCTIONAL FEATURES LIST

S.No	Feature Name	Feature Description	Module / Component	Status	Marks
1	User Auth & Management	Secure sign-up, login, password encryption, and role-based access control.	Security / Auth	**Done**	0.5
2	Legal Template Selection	Interactive UI for selecting preset legal document categories (NDAs, Contracts, Agreements).	User Interface	**Done**	0.5
3	AI Legal Document Generator	LLM-driven engine generating customized legal contracts based on user inputs.	Backend / Logic	**Done**	1.0
4	Clause Customization Engine	Allows users to modify, add, or exclude specific legal clauses dynamically.	Backend / UI	**Done**	0.5
5	Automated PDF Export	High-fidelity PDF document rendering and downloading with custom styling.	API / Export	**Done**	0.5
6	Document Storage & History	Secure cloud/database persistence for saved user document drafts and history.	Database / Storage	**Done**	0.5
7	Compliance Validation Check	Automated scanner checking mandatory legal clauses and regulatory compliance.	Backend / Logic	**Done**	0.5
8	Digital Signature / Multi-lang	Integration with e-sign providers and translation support across Indian languages.	API / Integration	**In Progress**	1.0

FEATURE SUMMARY & CATEGORY BREAKDOWN

Metric	Count / Value
Total Features Planned	**8**
Total Features Implemented	**7**
Core / Must-Have Features	**6**
Additional / Nice-to-Have Features	**2**

Category	Features	Example Features
User Interface (UI)	**2**	Template Picker, Dynamic Form UI
Backend / Logic	**2**	AI Legal Engine, Compliance Check
	1	Encrypted Document History

Metric	Count / Value
Features Tested & Verified	**7**

Category	Features	Example Features
Database / Storage		
API / Integration	**2**	PDF Export, E-Signature API
Security / Auth	**1**	JWT Authentication, RBAC

SMARTBRIDGE

Let's Bridge the Gap

SKILL WALLET
A SmartBridge Product

Date:	15 March 2024	**Maximum Marks:**	4 Marks
Team ID:	**SWTID-2026-5132**	**Project Name:**	**LegalEase: AI powered legal**

TEAM MEMBER	ASSIGNED ROLE	ASSIGNED SECTION & RESPONSIBILITIES
Arsheeya farveen A	**Team Lead & AI Architect**	Overall Project Coordination & "SAYS" Section (User Feedback)
Abinaya R	**Legal Research Lead**	"THINKS" Section (User Insights & Doubts)
K Akshaya	**UX/UI Specialist**	"DOES" Section (User Actions & Workflow)
Anitha S	**AI Developer**	"FEELS" Section (Emotions, Pains & Gains)
Anupriya S	**Business & Legal Analyst**	"PERSONA NAME" & Target User Definition

EMPATHY MAP CANVAS

Create an empathy map to understand your customer/user from four perspectives — what they **Say**, **Think**, **Do**, and **Feel** — in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

Owner: Arsheeya farveen A

- "Legal jargon is too complex and hard to understand."
- "Hiring a lawyer for simple contract reviews is too expensive."
- "I need fast clarification on contract risks before signing."
- "Is there an AI tool that can summarize legal clauses accurately?"

PERSONA NAME

Owner: Anupriya S

Adv. Priya Sharma / Alex Mercer

Role: SMB Owner / In-house Junior Legal Counsel

- **Target User:** Small business owners, freelancers, and legal associates.
- **Context:** Handles multiple contracts daily with limited time and budget.

THINKS

Owner: Abinaya R

- "Am I missing hidden liabilities or penalty clauses?"
- "How reliable is AI legal advice compared to human lawyers?"
- "Can this tool save my firm 10+ hours of drafting every week?"
- "Data confidentiality and privacy are critical priorities."

DOES

Owner: K Akshaya

- Manually reads long PDF documents line-by-line.
- Searches online for complex legal terminology definitions.
- Uploads legal drafts into LegalEase AI for instant analysis.
- Cross-checks AI risk highlights with legal compliance checklists.

LegalEase: AI Powered Legal

Empowering users with simplified legal comprehension & risk intelligence.

FEELS

Owner: Anitha S

- **Anxious:** Worried about hidden contract traps or breach risks.
- **Overwhelmed:** Exhausted by dense legal text and tight deadlines.
- **Relieved:** Excited to get instant, plain-English legal summaries.
- **Confident:** Empowered to negotiate better contract terms.

BRAINSTORMING & IDEA PRIORITIZATION

LegalEase: AI-Powered Legal Document Generator

Date	01 October 2026	**Team ID**	SWTID-2026-5132
Project Name	LegalEase: AI-Powered Legal Document Generator	**Maximum Marks**	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member contributes an idea related to the development of LegalEase. The ideas below are aligned with the project workflow: AI generation, FastAPI backend, Streamlit frontend, document formatting/export, and testing/deployment.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Arsheeya Farveen A	Design the overall system architecture and FastAPI backend flow for accepting l	Backend flow for accepting l	1
2	Abinaya R	Integrate the Gemini AI model and develop structured prompts for generating co	AI integration	1
3	K Akshaya	Build a simple Streamlit interface for document type, parties, terms and	Frontend UI	1
4	Anitha S	Develop document formatting and export features for TXT, DOCX and PDF	TXT, DOCX and PDF	1
5	Anupriya S	Handle testing, validation and deployment preparation; testing, deployment,	Testing / Deployment	1

Step 2: Idea Prioritization

The ideas are grouped into one integrated LegalEase solution because the project requires the frontend, backend, AI integration, document generation and testing to work together.

Group No.	Final Idea	Feasibility	Importance	Priority Selected
1	AI-powered legal document generation with Streamlit frontend, FastAPI backend, Gemini integration,	High	High	Yes

Team Work Allocation

Member	Assigned Responsibility
1. Arsheeya Farveen A	System architecture + FastAPI backend structure, routes and API flow.
2. Abinaya R	Gemini AI integration + prompt design + legal document generation logic.
3. K Akshaya	Streamlit frontend + input forms + document preview/edit interface.
4. Anitha S	TXT/DOCX/PDF formatting + export + branding elements such as logo, headings and footer.
5. Anupriya S	Testing + validation + local deployment preparation + end-to-end verification.

Project basis: LegalEase uses Streamlit for the frontend, FastAPI for the backend, Gemini for AI generation, and supports editable previews plus TXT, DOCX and PDF export.

PROJECT INITIALIZATION AND PLANNING PHASE

Define Problem Statements – LegalEase: AI-Powered Legal

Date	01 October 2026	**Team ID**	SWTID-2026-5132
Project Name	LegalEase: AI-Powered Legal	**Maximum Marks**	3 Marks

Define Problem Statements (Customer Problem Statement Template)

Each statement describes a LegalEase customer's point of view and is assigned in the exact order of the team members.

PS-1 – Arsheeya Farveen A

Problem Statement (PS)	
I am (Customer)	An individual or small business owner
I'm trying to	Create a legal document such as an agreement, contract or NDA
But	They may not know the correct legal structure, clauses or information required
Because	Preparing a suitable document manually can be time-consuming
Which makes me feel	Uncertain and dependent on external help
LegalEase direction	Easy, structured and customizable legal-document generation.

PS-2 – Abinaya R

Problem Statement (PS)	
I am (Customer)	A user who needs a legal document quickly
I'm trying to	Generate a document based on parties, terms and effective date
But	Generic templates may not match exact requirements
Because	Many sections may need manual modification
Which makes me feel	Frustrated by repetitive editing
LegalEase direction	AI-powered generation using structured user inputs.

PS-3 – K Akshaya

Problem Statement (PS)	
I am (Customer)	A user without a technical or legal background
I'm trying to	Enter details and review the generated document easily
But	Complex interfaces and legal terminology can be difficult
Because	The user may struggle with what information to enter
Which makes me feel	Confused or uncomfortable
LegalEase direction	Simple Streamlit inputs with preview and editing.

PS-4 – Anitha S

Problem Statement (PS)	
I am (Customer)	A user who wants a professional final document
I'm trying to	Download the generated document in a usable format
But	Raw AI text may lack professional formatting
Because	Manual reformatting may be required
Which makes me feel	Extra work is needed before sharing
LegalEase direction	TXT, DOCX and PDF export with professional formatting.

PS-5 – Anupriya S

Problem Statement (PS)	
I am (Customer)	A user who wants a reliable document-generation service
I'm trying to	Generate, edit, verify and download smoothly
But	Errors in inputs, generation or formatting can affect output
Because	The user needs a dependable end-to-end process
Which makes me feel	Concerned about reliability
LegalEase direction	Testing and validation of the complete LegalEase workflow.

Work Allocation: 1. Arsheeya – Backend & architecture | 2. Abinaya – AI/Gemini integration | 3. K Akshaya – Streamlit frontend | 4. Anitha – Document formatting & export | 5. Anupriya – Testing & deployment

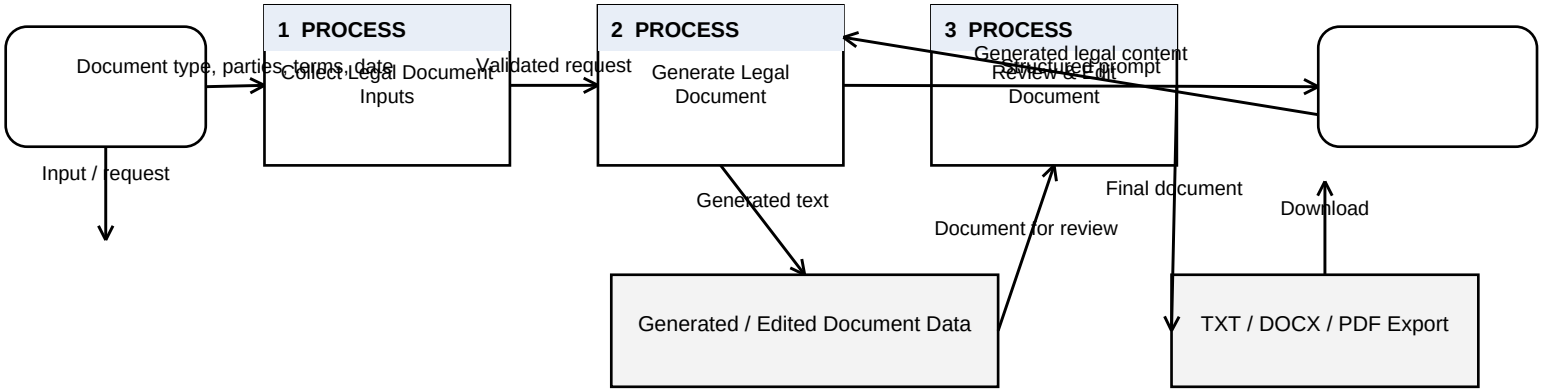

DATA FLOW DIAGRAM

LegalEase: AI-Powered Legal

Date: 01 October 2026 Team ID: SWTID-2026-5132 Maximum Marks: 2 Marks

Project Name: LegalEase: AI-Powered Legal

Data Flow Diagram: Shows how data moves between the user, LegalEase processes, AI service, and document storage/export components.

DFD Symbol Legend

Rounded shape = External Entity Numbered rectangle = Process Solid rectangle = Data Store Labeled arrow = Data Flow

TEAM WORK ASSIGNMENT — according to name order

1. **Arsheeya farveen A — Requirements & User Flow** Collect requirements, define user inputs, use cases and overall customer flow.
2. **Abinaya R — AI Model & Document Generation** Handle Gemini AI integration, prompting and legal document generation.
3. **K Akshaya — FastAPI Backend & API Logic** Develop main.py/routes.py, /generate API and request validation.
4. **Anitha S — Streamlit Frontend & UI** Build the Streamlit interface, input forms, preview and editing experience.
5. **Anupriya S — Formatting, Export & Testing** Implement TXT/DOCX/PDF export, formatting checks, testing and final verification.

LegalEase — DFD DETAILS

Team ID: SWTID-2026-5132

Components and Data Movement

External Entity: User / Customer

Provides document type, parties involved, terms and effective date; receives the final legal document.

Process 1: Collect Legal Document Inputs

Captures and validates the information required to create a legal document.

Process 2: Generate Legal Document

Sends structured information to the AI component and receives generated legal content.

Process 3: Review & Edit Document

Displays the generated document for review and allows the user to make edits.

Data Store: Generated / Edited Document Data

Stores the working document content before final export.

External AI Service: Gemini AI

Processes the structured prompt and generates legal document content.

Output: TXT / DOCX / PDF Export

Provides the final document in supported downloadable formats.

Team Members

1. 1. Arsheeya farveen A	Requirements & User Flow
2. 2. Abinaya R	AI Model & Document Generation
3. 3. K Akshaya	FastAPI Backend & API Logic
4. 4. Anitha S	Streamlit Frontend & UI
5. 5. Anupriya S	Formatting, Export & Testing

Prepared in the uploaded DFD template style. Project work allocation follows the order of names supplied by the team.

SOLUTION REQUIREMENTS

LegalEase: AI-Powered Legal

Date	01 October 2026	**Team ID**	SWTID-2026-5132
Project Name	LegalEase: AI-Powered Legal	**Maximum Marks**	4 Marks

Define Functional and Non-Functional Requirements for LegalEase, describing what the system should do and how well it should perform.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority	Assigned Team Member
1	Authentication	Allow users to securely access the LegalEase application and protect document-related user information.	High	Arsheeya farveen A
2	Authorization levels	Define access permissions for users and administrative/project functions so only permitted actions are available.	Medium	Arsheeya farveen A
3	External interfaces	Connect the application with the Gemini AI service and the FastAPI/Streamlit application components required for document generation.	High	Abinaya R
4	Transactions processing	Accept document type, parties, terms and effective date; validate the request; send it for AI generation; return the generated legal content.	High	K Akshaya
5	Reporting	Provide document preview and allow generated documents to be exported as TXT, DOCX and PDF files.	Medium	Anitha S
6	Business rules, etc.	Generate structured legal documents such as agreements, contracts, NDAs, lease agreements and employment offer letters based on the supplied inputs.	High	Abinaya R
7	Compliance to laws or regulations	Protect sensitive user-provided information and present generated legal content as a document-generation aid; legal use should be reviewed by an appropriate professional when necessary.	High	Anupriya S
8	Other	Provide editable document preview, formatting, branding/logo support, terms tables and downloadable final output.	Medium	Anitha S

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria	Assigned Team Member
1	Performance & Speed	Document generation and interface interactions should respond promptly for normal requests.	Normal page interaction should be responsive; generation should complete without unnecessary delay.	Abinaya R
2	Scalability	The architecture should allow the frontend, backend and AI integration to be expanded as usage grows.	Components remain modular so additional users and document types can be supported.	K Akshaya
3	Security & Data Privacy	Sensitive document inputs and generated legal content should be handled securely, with API credentials kept outside source code.	Use environment variables for API keys and avoid exposing sensitive data in the interface or logs.	Anupriya S
4	Reliability & Availability	The application should continue to provide predictable document generation and clear error handling when a service fails.	Validate inputs and provide useful error feedback; successful requests produce a downloadable document.	K Akshaya

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria	Assigned Team Member
5	Usability & Accessibility	The interface should be simple enough for users without a legal background to enter details, review content and download documents.	Clear labels, understandable fields, editable preview and straightforward download options.	Anitha S
6	Maintainability & Portability	The system should use a modular structure so frontend, backend, AI and document-formatting components can be maintained independently.	Use separated modules and standard Python dependencies; support TXT, DOCX and PDF output.	Arsheeya farveen A

TEAM WORK ASSIGNMENT

Work allocation follows the exact order of names provided.

No.	Team Member	Primary Responsibility	Work Assigned
1	Arsheeya farveen A	Requirements & Project Coordination	Define user requirements, authentication/authorization needs, overall workflow and maintainability requirements.
2	Abinaya R	AI Integration & Document Generation	Handle Gemini AI integration, prompt design, external interface requirements and legal-document generation functions.
3	K Akshaya	Backend & API	Develop FastAPI logic, request validation, transaction processing, scalability and reliability requirements.
4	Anitha S	Frontend & User Experience	Develop Streamlit UI, editable preview, reporting/export interface, usability and accessibility requirements.
5	Anupriya S	Security, Compliance & Testing	Handle security/privacy considerations, compliance requirements, testing, error checks and final quality verification.

The uploaded template defines Functional Requirements as system behaviors/features and Non-Functional Requirements as criteria describing how the system should operate. ■filecite■turn2file0■L7-L14■

CUSTOMER JOURNEY MAP

LegalEase: AI-Powered Legal Document Generator

Date	01 October 2026	**Team ID**	SWTID-2026-5132
Project Name	LegalEase: AI-Powered Legal	**Maximum Marks**	2 Marks

Map out the user's experience stage-by-stage, including actions, touchpoints, thoughts, feelings, process ownership, and improvement opportunities.

Actions **What does the customer do?**	• Chooses document type • Enters parties involved • Adds terms & conditions • Enters effective date	• Clicks Generate Document • AI processes the inputs • Reviews generated legal content • Checks clauses and formatting	• Edits generated text if needed • Adds/customizes branding • Selects TXT, DOCX, or PDF • Downloads the final document
Touchpoint **What part of the service do they interact with?**	• Streamlit web interface • Document-type field • Party and terms input fields • Date input	• Generate Document button • FastAPI /generate endpoint • Gemini AI generation • Editable preview	• Edit Document option • HTML preview • Download buttons • Formatted exported file
Customer Thought **What is the customer thinking?**	“I need a legal document, but I don't know how to draft one.” “I hope I enter the details correctly.”	“Is the generated document relevant to my inputs?” “Are the clauses clear and complete?”	“Can I make changes before using it?” “Which format should I download?”
Customer Feeling **What is the customer feeling?**	• Unsure • Curious • Hopeful	• Interested • Relieved • Cautious while reviewing	• Confident • Satisfied • Ready to use the document
Process Ownership **Who is in the lead on this?**	**Arsheeya farveen A** User input flow & requirement handling	**Abinaya R** + **K Akshaya** AI generation & FastAPI/API logic	**Anitha S** + **Anupriya S** Frontend, formatting, export & testing
Opportunities **How can we improve this stage?**	• Add clearer input guidance • Provide document examples • Validate required fields	• Improve prompt quality • Add stronger validation • Show clearer clause explanations	• Improve editing experience • Add branding controls • Add download/error feedback

TEAM WORK ASSIGNMENT

Work is assigned according to the order of names provided.

No.	Team Member	Assigned Area	Responsibilities
1	**Arsheeya farveen A**	**Requirements & User Flow**	• Understand LegalEase requirements and user scenarios • Define document input fields and user journey • Prepare project requirements and use-case notes • Coordinate the overall workflow
2	**Abinaya R**	**AI Model & Document Generation**	• Work on Gemini AI integration • Design prompts for legal document generation • Handle document-generation functionality • Test generated content with different inputs
3	**K Akshaya**	**FastAPI Backend & API Logic**	• Develop/configure main.py and routes.py • Create the /generate POST endpoint • Validate inputs using Pydantic • Connect backend with the Gemini document generator
4	**Anitha S**	**Streamlit Frontend & User Interface**	• Design the Streamlit interface • Create input fields and buttons • Implement document preview and editing interface • Improve user-friendly layout and interaction
5	**Anupriya S**	**Formatting, Export & Testing**	• Handle TXT, DOCX and PDF export features • Check formatting, logo, headings, tables and footer • Perform end-to-end testing • Verify final deployment and project output

PROJECT WORKFLOW COVERED

Stage	Work	Details
Activity 1	**Model Selection & System Architecture**	Gemini model, Streamlit frontend, FastAPI backend, AI integration and environment setup
Activity 2	**Core Functionalities Development**	Legal document generation, editable preview, formatting and TXT/DOCX/PDF export
Activity 3	**main.py & API Logic**	FastAPI initialization, routes, Pydantic request model and /generate endpoint
Activity 4	**Frontend with Streamlit**	Input interface, dynamic preview, editing and download options
Activity 5	**Deployment**	Dependencies, environment variables, local deployment and functionality testing

Activity 6	**Conclusion & Final Testing**	End-to-end testing and verification under different input combinations

Source basis: the uploaded LegalEase project document describes the project as an AI-powered legal document generator using Gemini, FastAPI and Streamlit, with editable previews and TXT/DOCX/PDF export. ■filecite■turn0file1■L2-L14■

Technology Stack

Team ID: SWTID-2026-5132

Project Name: LegalEase: AI Powered Legal

Maximum Marks: 2 Marks

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	React.js, HTML5, CSS3, JavaScript	Creates a responsive, user-friendly interface with reusable UI components.
2	Backend / Server-Side	Python + FastAPI	Supports fast API development and connects the interface to application logic and AI services.
3	Database / Data Storage	PostgreSQL	Stores user accounts, queries, document details and application records in a structured database.
4	Cloud / Hosting / Deployment	Render + Docker	Provides a straightforward deployment workflow; Docker helps keep the app environment consistent.
5	Version Control & CI/CD	GitHub	Supports team collaboration, version history, code review and organized project development.
6	Third-Party APIs / Other Tools	AI/LLM API; REST APIs	Enables AI-assisted legal information responses and communication between application components.

Note: The technologies above are a proposed stack for the project and can be adjusted to match the tools actually used by the team.

Team Members & Work Assignment

Responsibilities are assigned in the exact order of names provided.

S.No	Team Member	Assigned Role	Major Responsibilities
1	Arsheeya farveen A	Project Lead & Requirements	Define project requirements and core features; coordinate the team; prepare project documentation and track progress.
2	Abinaya R	UI/UX & Frontend	Design screens and implement the responsive user interface using React.js, HTML, CSS and JavaScript.
3	K Akshaya	Backend Development	Build backend services and APIs using Python/FastAPI; connect frontend requests with application logic.
4	Anitha S	Database Management	Design the database structure; manage storage and retrieval of user queries, legal resources and application data.
5	Anupriya S	AI Integration, Testing & Deployment	Connect the AI/LLM API; test features and responses; report bugs and assist with deployment and GitHub updates.

Project: LegalEase: AI Powered Legal — an AI-assisted legal information application.

Coding & Solution

Date	15 March 2026
Team ID	xxxxxx
Project Name	xxxxxx
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Programming Language(s)	[e.g., Python, JavaScript, Java]
Framework(s) Used	[e.g., Flask, React, Spring Boot]
Key Features Implemented	
Pending / Incomplete Features	
Setup / Run Instructions	

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	
2	Meaningful variable and function names are used	
3	Code includes comments / documentation where necessary	
4	Error handling is implemented for critical operations	
5	The application runs without critical errors	
6	Code is committed to a version control repository	

Additional Notes / Comments:

Code-Layout, Readability and Reusability

Date	15 March 2024
Team ID	XXXXXX
Project Name	XXXXXX
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughou	the code	
2	Proper File Structure	Files and folders are logically organize	d	
3	Meaningful Variable Names	Variables reflect their purpose clearly		
4	Function / Method Names	Functions are descriptively named		
5	Code Comments	Inline and block comments explain log	c	
6	Modular Design	Code is split into reusable functions/m	dules	
7	No Redundant Code	Duplicate or unused code is removed		
8	Error Handling	Exceptions and errors are handled gra	cefully	

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technolog	yWhere Reused	Reusability Level (High / Medium / Low)
1				

2

PROJECT DOCUMENTATION

Team ID: SWTID-2026-5132
Project Name: LegalEase: AI-powered legal
Maximum Marks: 10 Marks

Project Overview

LegalEase is an AI-powered legal-document generation application designed to simplify the creation of structured legal documents. Users provide the document type, parties involved, terms and conditions, and effective date. The system uses Generative AI to create editable legal content and supports downloading the result as TXT, DOCX and PDF.

Objective

To make legal-document creation easier and more accessible for users who may not have a legal background, while providing customizable, editable and well-formatted documents.

Scope

The project covers AI-based document generation, user input collection, document preview and editing, formatting, multi-format export, backend API integration and local deployment.

Technology Stack

Frontend	Streamlit
Backend	FastAPI + Uvicorn
AI Integration	Google Gemini Generative AI
Programming Language	Python 3.10+
Document Generation	python-docx, FPDF, TXT generation
Configuration	python-dotenv / .env

PRE-REQUISITES

• Python 3.10 or later
• Basic Python programming knowledge
• FastAPI and Streamlit knowledge
• Familiarity with Generative AI / Gemini API
• Basic document-formatting knowledge
• Git/version-control knowledge
• A valid Gemini API key stored securely in an environment file

PROJECT WORKFLOW

Milestone 1: Model Selection and Architecture

Research Gemini models suitable for structured legal-document generation. Define the architecture with Streamlit as the presentation layer, FastAPI as the backend, Gemini as the AI service, and document formatting modules for TXT, DOCX and PDF output. Set up the Python development environment.

Milestone 2: Core Functionalities Development

Implement legal-document generation from user inputs such as document type, parties, terms and effective date. Add text sanitization, document formatting, editable preview and download functions for TXT, DOCX and PDF.

Milestone 3: API Logic Integration

Create the FastAPI application and the /generate POST endpoint. Use a Pydantic request model to validate document inputs, connect the backend to the Gemini document generator, and return generated legal content to the frontend.

Milestone 4: Frontend Development

Develop the Streamlit interface with fields for document type, parties, terms and effective date. Add Generate Document, Preview, Edit and Download controls. Display generated content clearly and support multiple export formats.

Milestone 5: Deployment and Testing

Prepare a virtual environment, install requirements, configure the Gemini API key, launch FastAPI with Uvicorn and start the Streamlit application. Test document generation, editing, formatting and TXT/DOCX/PDF downloads.

Milestone 6: Conclusion and Future Enhancement

Review the complete end-to-end workflow, document the results and identify future enhancements such as deeper contract analysis, legal-database integration, multilingual support and improved recommendations.

DETAILED ACTIVITIES

Milestone 1 – Model Selection and Architecture

Activity 1.1: Understand LegalEase requirements and supported document types such as contracts, NDAs, lease agreements and employment offer letters.
Activity 1.2: Research Gemini capabilities for structured legal text generation and select a suitable model.
Activity 1.3: Define the architecture connecting Streamlit, FastAPI, Gemini and document generators.
Activity 1.4: Create the Python virtual environment and install FastAPI, Uvicorn, Streamlit, Gemini SDK and document libraries.

Milestone 2 – Core Functionalities

Activity 2.1: Generate legal documents from document type, parties, terms and dates.
Activity 2.2: Sanitize generated text and format sections, headings, tables, logo and footer.
Activity 2.3: Provide editable document preview.
Activity 2.4: Implement TXT, DOCX and PDF download functionality.

Milestone 3 – API Logic Integration

Activity 3.1: Initialize the FastAPI application and health-check endpoint.
Activity 3.2: Define a Pydantic DocumentRequest model.
Activity 3.3: Implement POST /generate and connect it to the Gemini document generator.
Activity 3.4: Validate inputs and return structured generated content.

Milestone 4 – Frontend Development

Activity 4.1: Create the Streamlit page layout and branding.
Activity 4.2: Add inputs for document type, parties, terms and effective date.
Activity 4.3: Send generation requests to the FastAPI backend and display the result.
Activity 4.4: Add editing and multi-format download controls.

DETAILED ACTIVITIES – CONTINUED

Milestone 5 – Deployment and Testing

Activity 5.1: Install all dependencies from requirements.txt.
Activity 5.2: Create the .env file and securely configure the Gemini API key.
Activity 5.3: Start the FastAPI backend using Uvicorn and the Streamlit frontend using the project run command.
Activity 5.4: Test different document types, input combinations, editing and all download formats.
Activity 5.5: Record bugs, corrections and final verification results.

Milestone 6 – Conclusion

Verify that the complete LegalEase workflow operates from user input through AI generation, preview, editing and document download. Prepare the final documentation and identify future improvements.

TEAM MEMBER WORK ASSIGNMENT

No.	Name	Assigned Work	Responsibilities
1	Arseeya Farveen A	Milestone 1 – Model Selection & Architecture	Research Gemini, define system architecture and prepare the development environment.
2	Abinaya R	Milestone 2 – Core Functionalities	Develop document generation, sanitization, formatting and export functionality.
3	Akshaya K	Milestone 3 – API Logic Integration	Develop FastAPI, Pydantic validation, /generate endpoint and Gemini integration.
4	Anitha S	Milestone 4 – Frontend Development	Develop Streamlit UI, inputs, preview/edit features and download controls.
5	Anupriya S	Milestones 5 & 6 – Deployment, Testing & Conclusion	Handle local deployment, testing, bug verification, final documentation and future enhancements.

EXPECTED OUTCOME

A working LegalEase application that accepts legal-document requirements, generates structured content through Gemini, allows users to preview and edit the result, and downloads the final document as TXT, DOCX or PDF.

Important Note

The project documentation describes the implementation plan. Actual API keys, deployment URLs and measured test results should be added by the team when available; they should not be included directly in the submitted PDF.

PROJECT EXECUTABLE FILES

Team ID: SWTID-2026-5132
Project Name: LegalEase: AI-powered legal
Maximum Marks: 3 Marks

Project Executable Files

This document follows the supplied executable-files submission template. It records the files, deployment details, run instructions and known limitations required for the LegalEase project. Items that depend on the team's actual deployment or repository are marked to be filled in rather than invented.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	To be filled
7	APK / Executable binary (if applicable)	NA
8	Dockerfile / Containerization config (if applicable)	To be filled / NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	To be filled

Step 2: File / Folder Structure

Suggested LegalEase project structure

LegalEase/	Main project folder
■■■ frontend/	Streamlit user interface
■ ■■■ app.py	Frontend entry point / UI
■■■ backend/	FastAPI application
■ ■■■ main.py	API entry point
■ ■■■ models.py	Request/data models
■■■ services/	Core application services
■ ■■■ gemini_generator.py	Gemini AI document generation
■■■ generators/	Document formatting and export
■ ■■■ docx_generator.py	DOCX generation
■ ■■■ pdf_generator.py	PDF generation
■ ■■■ txt_generator.py	TXT generation
■■■ requirements.txt	Python dependencies
■■■ .env.example	Environment variable template
■■■ README.md	Setup and run instructions
■■■ tests/	Testing files and results

Step 3: Deployment / Access Details

Hosted / Deployed URL	To be filled after deployment
Login Credentials (Demo)	Not required / To be filled if authentication is added
Platform / Hosting Provider	To be filled (for example, the team's selected hosting provider)
Repository Link	To be filled with the team's actual repository URL
Demo Video Link	To be filled with the team's actual demo video URL

Step 4: Run Instructions

1. Install Python and create a virtual environment.
2. Open the LegalEase project folder in the terminal.
3. Install dependencies using **pip install -r requirements.txt**.
4. Create a **.env** file from **.env.example** and add the required Gemini API configuration.
5. Start the FastAPI backend using the project's configured startup command.
6. Start the Streamlit frontend using the project's configured Streamlit command.
7. Open the displayed local Streamlit URL in a browser.
8. Enter the document type, parties, terms and effective dates.
9. Generate the document, review/edit the preview, and download it as TXT, DOCX or PDF.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI-generated legal content may require human/legal review before real use	Add a review/disclaimer step and verify important documents manually.
2	Gemini/API access depends on a valid API configuration and network availability	Configure the required environment variables and internet connection.
3	Actual deployment, repository and demo links are not provided in the source template	Fill in the team's real links before final submission.

TEAM MEMBER WORK ASSIGNMENT

No.	Name	Assigned Work	Responsibilities
1	Arseeya Farveen A	Source Code & Project Structure	Organize the complete source code, folders and README/setup files.
2	Abinaya R	Dependencies & Configuration	Maintain requirements.txt and .env.example/configuration requirements.
3	Akshaya K	Deployment & Repository	Prepare deployment setup and maintain the project repository details.
4	Anitha S	Testing & Executable Files	Prepare test files/results and verify the project can be executed correctly.
5	Anupriya S	Documentation & Demo	Prepare run instructions, known issues, screenshots/demo video and final submission checklist.

PROBLEM–SOLUTION FIT CANVAS

Team ID: SWTID-2026-5132
Project Name: LegalEase: AI-powered legal

TEAM MEMBER WORK ASSIGNMENT

No.	Name	Assigned Area	Work
1	Arseeya Farveen A	Customer & Problem Research	Identify target customers, their legal-document needs, and the main problems/pains they face.
2	Abinaya R	Root Cause & Behaviour Analysis	Study the causes of the problems and document customer behaviour and intensity/frequency.
3	Akshaya K	Available Solutions & Channels	Review existing solutions, their pros/cons, and identify online/offline channels used by customers.
4	Anitha S	Triggers & Emotions	Identify triggers that make users seek a solution and describe emotions before and after using the solution.
5	Anupriya S	Solution & Customer Limitations	Define LegalEase as the proposed solution and identify customer limitations such as budget, devices, and legal background.

PROBLEM–SOLUTION FIT CANVAS – LEGALEASE

Team ID: SWTID-2026-5132 **Project:** LegalEase: AI-powered legal

1. CUSTOMER SEGMENT(S) [CS] Entrepreneurs, startup founders, freelancers, landlords, professionals and individuals who need legal documents but may not have a legal background.	**2. PROBLEMS / PAINS + FREQUENCY [PR]** Difficulty creating structured legal documents; unfamiliar legal language; time and cost involved in preparing contracts, NDAs and agreements. These needs can arise whenever a user requires a legal document.	**3. TRIGGERS TO ACT [TR]** Need for an employment contract, NDA, lease agreement or other legal document; need for a quick editable document; need to customize terms and download a ready-to-use file.
4. EMOTIONS BEFORE / AFTER [EM] **Before:** confusion, uncertainty and difficulty understanding legal wording. **After:** greater confidence and clarity through structured, editable legal content.	**5. AVAILABLE SOLUTIONS – PROS & CONS [AS]** **Existing options:** manually drafting documents or seeking professional/legal assistance. **Pros:** can provide formal legal content. **Cons:** may require more time, cost, or legal knowledge.	**6. CUSTOMER LIMITATIONS [CL]** Limited legal knowledge; possible budget constraints; need for accessible tools and suitable devices; need for easy-to-edit and easy-to-export documents.
7. BEHAVIOR + INTENSITY [BE] Users enter document type, parties, terms and effective dates; review generated content; edit the document; then download it as TXT, DOCX or PDF.	**8. CHANNELS OF BEHAVIOR [CH]** **Online:** web application / Streamlit interface for entering details, generating, editing and downloading documents. **Offline:** downloaded PDF/DOCX/TXT files for use and sharing.	**9. PROBLEM ROOT / CAUSE [RC]** Legal documents contain complex terminology and structured clauses. Users may lack legal expertise and may find it difficult to create professional documents from scratch.

10. YOUR SOLUTION [SL]	TECHNICAL SUPPORTING FEATURES	EXPECTED VALUE
LegalEase uses Generative AI to create customizable, accurate and editable legal-document templates. It supports contracts, NDAs, lease agreements and more, with editable previews and export to PDF, DOCX and TXT.	Frontend: Streamlit Backend: FastAPI AI integration: Gemini Formatting: DOCX, PDF and TXT generators Inputs: document type, parties, terms and dates.	Make legal-document creation more accessible, structured and convenient for users without a legal background, while supporting customization, editing and multiple export formats.

Source basis: LegalEase project document and the supplied Problem–Solution Fit Canvas template. The project document describes AI-powered legal document generation, FastAPI, Streamlit, Gemini integration, editable previews, and TXT/DOCX/PDF export.

PROJECT INITIALIZATION AND PLANNING PHASE

Team ID: SWTID-2026-5132
Project Name: LegalEase: AI-powered legal
Maximum Marks: 5 Marks

TEAM MEMBER WORK ASSIGNMENT

No.	Name	Assigned Work	Responsibilities
1	Arseeya Farveen A	Project Planning & Customer Research	Study the target users of LegalEase and identify their legal-document needs and major problems.
2	Abinaya R	AI & Legal Document Research	Study the types of legal documents supported and prepare the requirements for AI-generated documents.
3	Akshaya K	Backend & API Planning	Work on the FastAPI backend plan, input handling, API routes and Gemini integration requirements.
4	Anitha S	Frontend & User Interface	Plan the Streamlit interface, user inputs, document preview, editing and download options.
5	Anupriya S	Testing, Export & Deployment	Plan testing, TXT/DOCX/PDF export, deployment requirements and final project documentation.

Project Proposal (Proposed Solution) Report

The LegalEase proposal aims to simplify the creation of legal documents using Generative AI. The system provides customizable, accurate and editable templates for documents such as employment contracts, lease agreements and Non-Disclosure Agreements (NDAs). It is designed to make legal-document creation more accessible to entrepreneurs, professionals and individuals who may not have a legal background.

Project Overview

Objective	To provide an AI-powered system that helps users generate structured, customizable and editable legal documents quickly and conveniently.
Scope	The project covers legal document generation, editable previews, formatting and export to TXT, DOCX and PDF. It uses a Streamlit frontend, FastAPI backend and Gemini AI integration.

PROBLEMS, PROPOSED SOLUTION AND RESOURCES

Team ID: SWTID-2026-5132 Project: LegalEase: AI-powered legal

Problem Statement

Creating legal documents can be difficult for people without legal knowledge. Users may face complex legal language, difficulty structuring clauses, and the time or cost involved in preparing contracts, NDAs, agreements and other documents.

Impact

Addressing these difficulties can make legal-document creation more accessible and convenient. LegalEase is intended to improve understanding and provide structured documents that users can edit and export.

Proposed Solution

LegalEase uses Generative AI to create customizable and editable legal-document templates based on user inputs such as document type, parties involved, terms and effective dates.

Approach

The system accepts user details through a Streamlit interface, sends the required information through a FastAPI backend to the Gemini AI integration, and returns structured legal content for preview, editing and export.

Key Features

• Legal document generation
• Editable document preview
• Support for contracts, NDAs, lease agreements and other documents
• Export as TXT, DOCX and PDF
• Document formatting with headings, tables, logos and footers
• User-friendly Streamlit interface

Resource Requirements

Resource Type	Description / Specification
Software / Frameworks	Python, FastAPI, Streamlit
AI Integration	Gemini Generative AI integration
Libraries	python-docx, fpdf, Pillow, requests, python-dotenv and related dependencies
Development	Python development environment with virtual environment and pip
Output Formats	TXT, DOCX and PDF

Project Work Distribution: The five members are assigned responsibilities in the exact order of the names provided: customer research, AI/legal-document research, backend/API, frontend/UI, and testing/export/deployment.

SOLUTION ARCHITECTURE

Team ID: SWTID-2026-5132
Project Name: LegalEase: AI-powered legal
Maximum Marks: 5 Marks

Solution Architecture Diagram

High-level architecture for LegalEase, following the supplied template's Presentation / Client, API, Core Logic, External Integration and Data / Storage structure.

PRESENTATION / CLIENT LAYER

Streamlit Web Interface
• Document type input
• Parties & terms input
• Effective date
• Preview / Edit / Download

↓↑

API / APPLICATION LAYER

FastAPI Backend
• POST /generate
• Pydantic DocumentRequest
• Request validation & routing

↓↑

CORE LOGIC / AI LAYER

GeminiDocumentGenerator
• Structured prompt generation
• AI legal-content generation
• Text sanitization

↓↑

FORMATTING & EXPORT LAYER

DOCX / PDF / TXT generators
• Headings & tables
• Logo / footer
• Editable and downloadable outputs

↓↑

DATA / STORAGE & CONFIGURATION

Environment configuration (.env)
Generated document data handled by the application
Exported TXT / DOCX / PDF files

COMPONENT DESCRIPTION TABLE

Team ID: SWTID-2026-5132 Project: LegalEase: AI-powered legal

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the user interface for entering legal-document details, viewing generated content, editing it and downloading the final document.	Streamlit
API / Application Layer	Receives user requests, validates input, routes document-generation requests and returns structured generated content.	FastAPI, Pydantic
Core Logic / AI Layer	Builds structured prompts and uses the AI model to generate legal-document content from document type, parties, terms and dates.	Gemini Generative AI
Formatting & Export Layer	Converts generated text into formatted documents and supports downloadable TXT, DOCX and PDF outputs.	python-docx, FPDF, TXT generation
Data / Configuration Layer	Stores application configuration securely and supports generated document output files.	.env, application file storage

TEAM MEMBER WORK ASSIGNMENT

No.	Name	Assigned Area	Work
1	Arseeya Farveen A	Presentation Layer	Streamlit UI, user inputs, preview and user interaction.
2	Abinaya R	API / Application Layer	FastAPI routes, request validation and application flow.
3	Akshaya K	Core Logic / AI Layer	Gemini integration, prompts and legal-document generation logic.
4	Anitha S	Formatting & Export Layer	DOCX/PDF/TXT formatting, editing and download functionality.
5	Anupriya S	Data / Configuration & Testing	Environment configuration, output handling, integration testing and documentation.

PERFORMANCE TESTING

Team ID: SWTID-2026-5132
Project Name: LegalEase: AI-powered legal
Maximum Marks: 5 Marks

Performance Testing

Performance testing evaluates how the LegalEase system behaves under expected and peak load conditions. This document records the proposed testing approach, scenarios, target metrics and team responsibilities. Actual measured values should be entered after the tests are executed.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman (API performance checks; repeated requests can be used for load measurement)
Type of Testing	Load Testing and Stress Testing
Target Module / API	Legal document generation API – POST /generate
Test Environment	Local development environment
Test Date	To be filled after testing

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Normal document-generation request using valid inputs	5	60	Successful response and valid generated legal content
2	Concurrent document-generation requests under expected load	10	60	Stable responses with acceptable response time and no significant errors
3	Higher concurrent requests to identify system stress point	20	60	System remains stable or clearly identifies the load limit
4	Invalid/incomplete input request handling	5	30	Validation/error response without application failure

PERFORMANCE TEST RESULTS & TEAM ASSIGNMENT

Team ID: SWTID-2026-5132 Project: LegalEase: AI-powered legal

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)
1	Response Time (Avg)	< 2 seconds	To be measured	Pending
2	Response Time (Max)	< 5 seconds	To be measured	Pending
3	Throughput (Req/sec)	To be measured	To be measured	Pending
4	Error Rate	< 1%	To be measured	Pending
5	CPU Utilization	< 80%	To be measured	Pending
6	Memory Utilization	< 80%	To be measured	Pending

Remarks

The target values above follow the supplied performance-testing template. Actual values and Pass/Fail status must be entered from the executed test results; they are intentionally not fabricated in this report.

Step 4: Observations & Analysis

Record response-time behaviour, throughput, error behaviour and CPU/memory usage for each test scenario. Compare the measured results with the target values and identify any bottlenecks or stability issues.

Step 5: Screenshots / Evidence

Attach screenshots of Postman/API test results or another performance-testing tool after execution. Recommended evidence: request statistics, response times, error counts and system resource usage.

TEAM MEMBER WORK ASSIGNMENT

No.	Name	Assigned Work	Responsibilities
1	Arseeya Farveen A	Testing Setup & API Preparation	Prepare the /generate API test requests and test data.
2	Abinaya R	Load Test Scenarios	Execute normal-load and concurrent-user test scenarios.
3	Akshaya K	Stress & Error Testing	Execute higher-load and invalid-input tests and record failures.
4	Anitha S	Metrics & Results	Record response time, throughput, error rate and resource metrics.

No.	Name	Assigned Work	Responsibilities
5	Anupriya S	Analysis & Documentation	Analyse results, prepare observations, collect screenshots and finalize the report.
